Web Development

Frontend

Responsibilities

Skills

Importance

Responsibilities of a web developer

- Design and make websites
- Fix and update websites
- Connect websites with servers and databases
- Test websites and fix errors
- Use good safety rules
- Write notes about the code
- Work with a team

SKILLS

To be a Web Developer, you need these skills:

- Clear communication and teamwork
- Creativity to solve problems
- Learning every day, because technology changes fast
- Organization and attention to detail

Frontend Development

A Frontend Developer works on what the user sees. They make the buttons, colors, and layout of the website. This is called the client side.

Languages and technologies:

- HTML – for the page structure
- CSS – for colors, fonts, and layout
- JavaScript – for interactivity (clicks, animations)

Tools and frameworks:

- React, Vue.js, Angular – JavaScript libraries and frameworks
- Bootstrap, Tailwind CSS – for fast and responsive design
- SASS/SCSS – tools to improve CSS

IMPORTANCE OF THE PROFESSION IN THE COMMUNITY.

This job is important.
Today, many people and companies need websites. A Web Developer helps people go online. They make websites easy to use and safe.
